

Benefits: Red Slime Control will quickly and safely remove the red slime (Cyano bacteria) from your aquarium without harming any of its inhabitants. In addition, unlike some other products, Red Slime Control will not discolor your aquarium's water. Red Slime Control is safe for all types of Saltwater Aquariums and will not harm any of your fish, corals or other reef invertebrates. Take control of Red Slime before it takes control of your aquarium! This package will treat 400 gallons (1514 liters).

Directions: For best results, siphon out as much red slime algae as possible from your aquarium. Remove a cup of water from your aquarium. Mix 1 level scoop of Red Slime Control in the cup for every 10 gallons (37.9 liters) of water in your aquarium. Dissolve thoroughly and pour solution into the aquarium. In rare cases when there is still live red slime remaining after 5 days, perform a 25% water change and repeat dosage.

Warning: This product is for aquarium use only, not for human consumption. Keep out of reach of children. If overdosed, this product could have some effect on pH and Oxygen levels.

- Reef Safe
- Quick and Effective
- Will not discolor water
- Veterinarian Approved
