

## Instruction for use :

Usage	Bénéfits of the treatment	Dose
<b>Aquarium start up</b>	> - Rapid set-up for nitrification and biological balance.	<b>1 ampoule per 60 litres</b>
<b>Nitrite surges</b> <i>Adding fish.</i>	> - Adjustment of nitrification activity.	
<b>After bactericidal treatment</b>	> - After elimination of treatment products, to boost biological filtration.	
<b>Dirty aquarium</b> <i>Proliferation of algae.</i>	> - Reduction of algae and cleaning by digestion of food, organic sludge and nitrate reduction.	<b>1 ampoule up to 1.000 litres every 15 days</b>
<b>Red algae in sea water</b>	> - To rebalance Nitrates /Phosphates ratios.	
<b>Inexplicable diseases</b>	> - Reduction of stress and pathogenic micro-organisms.	
<b>Regular maintenance</b>	> - To conserve and optimise ratios between the useful strains of bacteria.	

## Why all 15 days ?

**BIO DIGEST** is particularly efficient the 2 weeks that follow its application. Bacterial multiplication speeds, different according to strains, allow to preserve these optimal purification proportions 15 days. If one wants to accelerate the process of purification it is not necessary to overdose but to near utilizations. Each week for example.

### Aquarium starting up :

1 ampoule per 60 litres + 1 ampoule for the filter.

### Aquarium purifier :

1 ampoule up to 1.000 litres every 15 days.

Strongly shake each ampoule for 15 seconds to ensure that the bacteria in the points are included in the solution. Dilute with 1 litre of aquarium water before pouring the mixture into the aquarium and the filter.

The purifying action of **BIO DIGEST** is strengthened by the association with **BIO TRACE**.

**Keep away from children**
